## How does the Sun Interact with my Road?

## Joe D Updates

### Illinois HIR News

We are pleased to announce that we are formally updating the outdated Local Road Specifications. This is long overdue and we are excited to work with the Central office to formalize these updates. Call if you are curious to hear about the nature of the spec.

### Jobsite News

Work starts this month! We have a great list of states that we are working with this year and we are excited to begin! Be on the lookout for when the crew comes to YOUR town!

### The Sun constantly interacts with our roads. So what?

SO, the way that solar radiation impacts each roadway is different based on a myriad of factors: aggregate size, AC percentage, dust ratio, subbase, subgrade, frost line, etc.

### What does that mean for me?

That means that the sun delivering haymakers to whatever is covering up your roadway! The good news? Unless your roadway is under water siege, your base layers are often protected... especially with larger aggregates.

With this knowledge, we can appropriately design for ways to better maintain our roadways! One way to take of this is... you guessed it... using Hot In-Place Recycling! **Let's talk about Heat Transfer!!**
